Review the product, before implementation

Proposed navigation, one integrated story and eight static wireframe states.

Three coordinator destinations

Situation

Flood evidence + exposure + assessment gaps

Contact Center

Calls, messages and event-by-event review

Response

Owned tasks, team/resources and current plans

The story to demonstrate

1 **Find a gap**

Area A has potential exposure but no relevant assessment.

2 **Review a discovery**

A scoped field report finds H5. The rest remains unknown.

3 **Clarify an emergency request**

A real call separates the moved household from its neighbor.

4 **Keep the plan current**

V1 fails. Linked plans need review; M2 stays unchanged.

What to review

Page hierarchy, missing information, review authority, volunteer workflow and the proposed scope cuts. These are drawings, not an application or evidence that phone, satellite or medical integrations work.

01 Situation - where have we not checked?

S01-S07 | Flood evidence, potentially exposed settlements and assessment gaps.

Relief Ledger Fictional Harbor district SYNTHETIC SCENARIO Coordinator Search

- Response

Situation

Create assessment task

Flood evidence | Assessment gaps [selected] | Known cases

LAYERS

[x] Observed extent

[x] Buildings

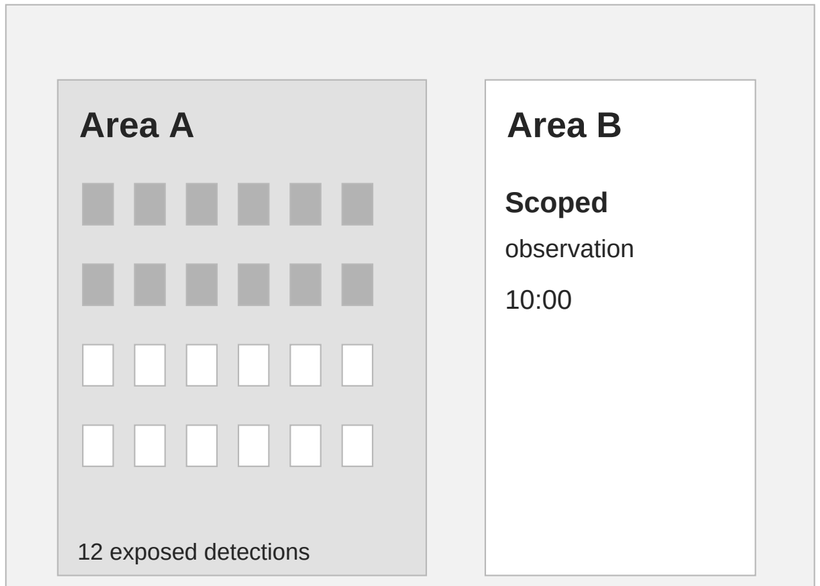
[ ] Population model

[ ] Station readings

[ ] Forecasts

[ ] Local reports

Types stay separate. No street-depth or safe-route inference.



Schematic extent / footprints. Not a satellite image.

Harbor East / Area A

NO CURRENT SCOPED ASSESSMENT

12 / 24 building detections overlap the synthetic extent.

Modeled exposed population: 120
Reference year: 2025
Uncertainty: not supplied

Households / occupancy: Unknown
Observed extent: 09:40
Building source: FP-A fixture

Inspect sources / scope

Needs attention - separate from feasible options

Item	Evidence / scope	Next owner
Area A assessment gap	Potential exposure; no scoped check	Unassigned
H4 assistance request	Location unknown; no confirmed option	Unassigned

Source health

Fixture only
No live feeds

Scenario clock only | Each observation and plan retains its own time.

1 Knowledge gap

No report does not mean no need. This view proposes a check, not a victim count.

2 Source dates

Observation time and population reference year remain visible. A new fetch is not a new observation.

3 Scoped control

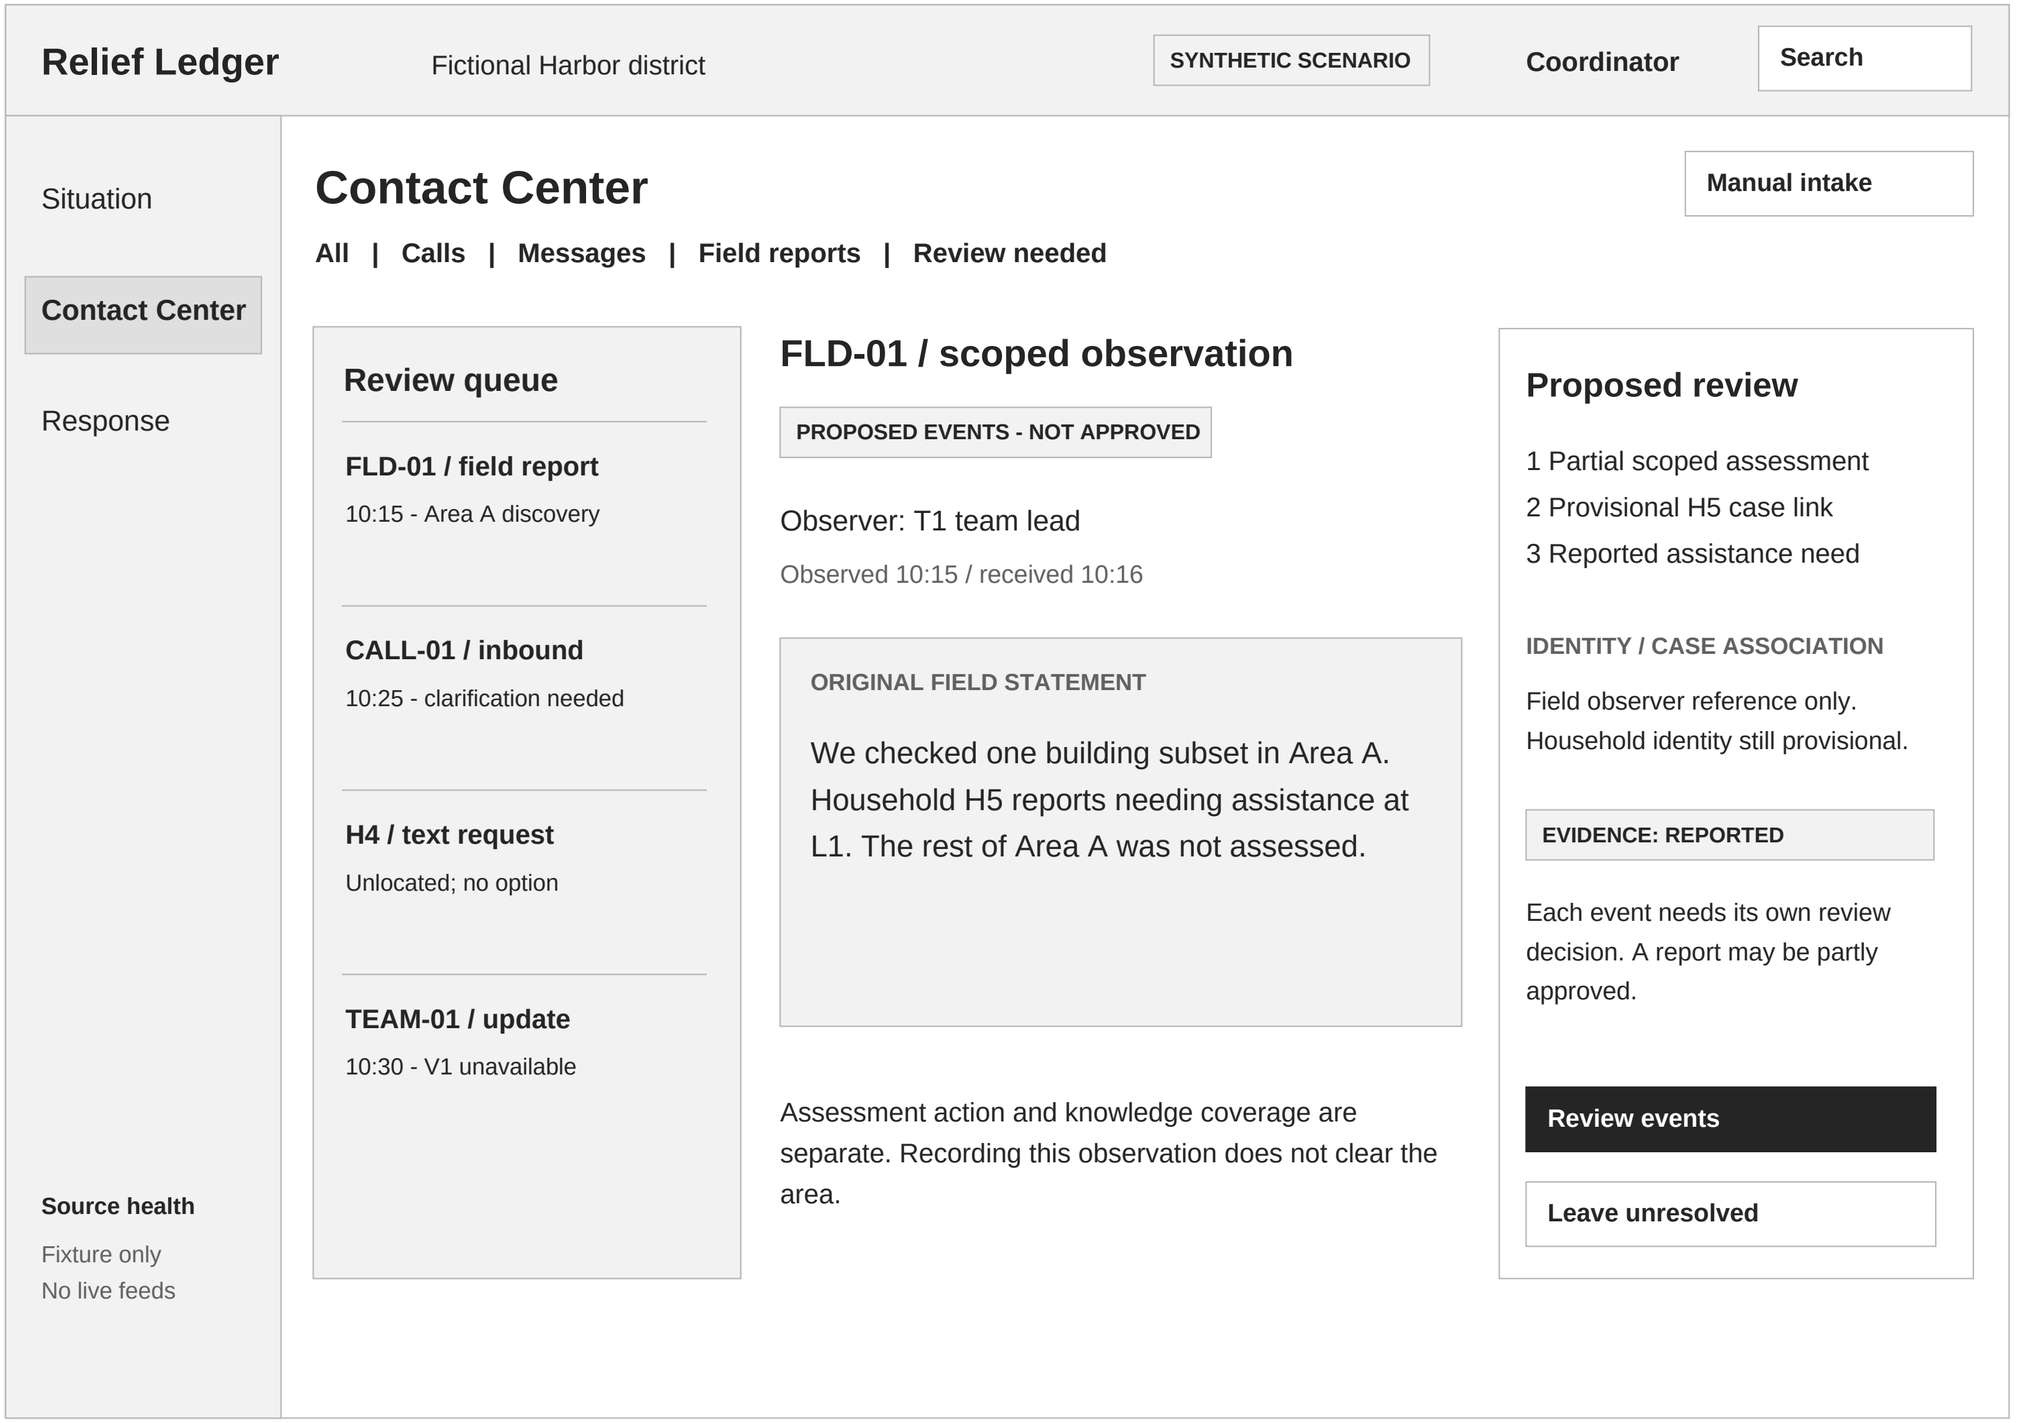
Area B has relevant scoped evidence. It is not labeled safe.

4 Action boundary

Create a draft assessment. Resource/access checks precede an actionable assignment.

02 Contact Center - review what was reported

C01-C09 | One queue for calls, messages and field observations.



Scenario clock only | Each observation and plan retains its own time.

1 Same review path

Field discovery, text and telephone evidence enter the same queue; source/channel stay visible.

2 Distinct household

Provisional H5 is not authenticated by a phone number or automatically merged with a neighbor.

3 Partial coverage

The discovery supplies a scoped observation. Unvisited places remain unknown.

4 Manual recovery

Manual intake remains available when AI fails. This does not imply live call-transfer support.

03 Contact Center - clarify, then approve each event

C03-C06 | A proposed location change must not silently rewrite the plan.

CALL-01 / review events

INTAKE ENDED - REVIEW PENDING

Case candidate H5 | association clarified | current record v3

Conversation evidence

THAI ORIGINAL RETAINED IN RECORD

LABELED ENGLISH TRANSLATION

Our family is now at Harbor Community Building; there are three of us. Our neighbor stayed at the old place. We share a phone. A family member needs medical help.

Clarification

Who moved? H5 household.
Neighbor is a different household.
Exact move time: Unknown.

No arrival time or assistance promise. Report received for coordinator review.

Proposed events / individual decisions

1 Reported current location

H5: L1 -> L3 / Harbor Community Building

Source excerpt 01 / move time unknown

M1 planned pickup remains L1 until revised.

Edit proposal | Approve attributed report

2 Neighbor stayed / identity unknown

Keep as proxy area report; no invented household case. Leave association unresolved.

Leave unresolved | Reject unsupported field

3 Medical help reported: Unassessed

Coordinator review is not clinical assessment.

1 Review is granular

Approving the location event does not approve the neighbor identity or corroborate medical facts.

2 Current vs planned

The case location changes; the existing pickup assumption is flagged. A coordinator must revise the brief.

3 Evidence survives

Original language, labeled translation, excerpt, timing and record version remain inspectable.

4 Conflict state

If another review changes v3, show a stale-review conflict and require rereading before approval.

Scenario clock only | Each observation and plan retains its own time.

04 Response - own the next action

RSP01-RSP08 | Team progress, reassessment and household outcomes remain separate.

Response

Create draft task

Assessment | Assistance | Teams & resources | Reassessment

Task	Progress	Team / resource	Attention
M1 / H5 assistance	Not started	T1 / V1	Needs reassessment
M2 / H2 assistance	Not started	T2 / V2	No linked change
M3 / H3 later task	Draft / sequential	Proposed T1 / V1	Resource check needed
A1 / Area A assessment	Scoped outcome reviewed	T1 released explicitly	Area partly assessed
VFY-01 / replacement	Draft / owner: desk	No option confirmed	Verify replacement

Available options and missing checks

V1 unavailable - attributed team report at 10:30
T1 is not automatically unavailable.
Replacement / capacity / access: Not confirmed

Inspect team / resource

M1 needs reassessment

Reason: explicit V1 dependency.
Owner: coordinator
Next: verify replacement; hold task.

Open current plan

Scenario clock only | Each observation and plan retains its own time.

1 Exact dependency

V1 affects M1 and M3. M2 stays unchanged. No generic team-wide unavailable flag.

2 No double booking

M3 is a later sequential draft; capacity/time are pending, not a second active mission.

3 Scarcity visible

No confirmed replacement means blocked/unassigned work and an open need.

4 Scoped outcomes

A1 task completion records only its scoped observation. It cannot mark the whole area assessed.

05 Response - reassess the plan and its brief

RSP04-RSP06 | A new acknowledgment does not mean assistance was delivered.

Relief Ledger Fictional Harbor district SYNTHETIC SCENARIO Coordinator Search

No live feeds

M1 / H5 assistance plan

BLOCKED - REASSESSMENT

Current reported location L3 | planned pickup L3 after explicit revision

Current constraints

T1 capability: scenario-reviewed
V1: reported unavailable at 10:30
Replacement: Unknown
Access authorization: must be checked
Destination D1: scoped acceptance only

Progress / dependencies

Not started
Linked to H5 pickup, T1, V1 and D1
V1 changes flag M1 / M3
M2 unchanged

No safe route or arrival promise is inferred from the map.

Draft brief v2 / not yet saved

AFTER SAVE: TEAM MUST ACKNOWLEDGE v2

Hold assistance task. Replacement resource is not confirmed. VFY-01 will verify options and report back to its assigned owner.

EVIDENCE AND HISTORY

TEAM-01: V1 report
CALL-01: H5 location
v1 acknowledgment retained
No task progress erased

Save reviewed brief v2

After authorized save, T1 must acknowledge v2. Acknowledge means received the brief, not started/completed.

Scenario clock only | Each observation and plan retains its own time.

1 Reassessment loop

Reason -> evidence -> owner -> next check -> revised brief -> acknowledgment.

2 History remains

The prior brief and acknowledgment stay visible. Each reason needs an explicit review decision.

3 Unknown prerequisites

An unknown replacement or access check is not a passed constraint.

4 Pending-save state

If a concurrent version changes, stop and rereview; never show a draft as successfully saved.

06 Shared case detail - needs and outcomes

Case drawer | Medical coordination is administrative; clinical governance is unavailable.

Case H5 / provisional household reference

Current reported location L3 | attributed resident report | time uncertainty

Separate needs / current outcomes

Need	Current status	Outcome evidence
Assistance requested	Open; M1 blocked	No confirmed receipt
Medical help reported	Unassessed	Qualified recipient not confirmed

Medical coordination

Reported medical assistance request
Coordinator review owner: desk
Referral: not requested
Recipient: not confirmed
Accepted handover / care: Unknown

Assign non-clinical follow-up

Evidence / correction history

10:15 FLD-01 - provisional discovery
10:25 CALL-01 - current location L3
10:30 TEAM-01 - V1 unavailable
Current location differs from old pickup
Shared phone does not identify neighbor

Inspect / dispute attributed report

Scenario clock only | Each observation and plan retains its own time.

1 No universal close

Water, transport, medical help and other needs have separate outcomes. Task completion is not receipt.

2 No clinical score

Unassessed stays unassessed. The coordinator is not a clinical reviewer.

3 Referral is distinct

Referral requested, acceptance, handover and confirmed care would need separate evidence.

4 Correction path

Dispute or correct a link/outcome with reason and history. Unreachable is not confirmation.

07 Supporting views - volunteer and resident

Own-task mobile view and resident text intake. Coordinator navigation stays three pages.

Team T1 / own task

SYNTHETIC - RESTRICTED VIEW

M1 / current brief v2

Hold task. Replacement resource not confirmed. Next verification owner: desk.

Progress: Not started

Brief v1 acknowledgment retained

Acknowledge brief v2

Report own-team update

V1 availability / observed time

Submit report for review

Only assigned details. Acknowledgment does not mean delivery.

Resident text intake

SYNTHETIC PROTOTYPE

Processing permission required. Your message will be reviewed; assistance is not confirmed.

You: We moved. Our neighbor stayed. We share a phone.

Clarification: Who moved, and which location are you at now?

Write your reply...

Submit message

1 Minimum necessary

Team leads see only their own assignments and report fields, not the entire inbox or other cases.

2 Version-specific

Acknowledgment is tied to v2. The hold instruction remains separate from mission progress.

3 Accessible intake

Simple text clarification; no registration maze or promise of emergency coverage.

4 Connectivity boundary

No offline-sync or outbound callback guarantee. Unsent and pending review are explicit states.

08 Recovery states - uncertainty stays visible

Failure variants | These are separate state examples, not one simultaneous incident.

Relief Ledger Fictional Harbor district **SYNTHETIC SCENARIO** **Coordinator** **Search**

Review and recovery

Interrupted call

INCOMPLETE - NO CASE UPDATE

Consented received content retained as an incomplete report. No rescue promise or completed-intake label.

Assign manual review owner

Stale review conflict

RECORD CHANGED - APPROVAL BLOCKED

Another reviewer updated v3 to v4. Inspect both sources and reread the current record before approval.

Reread current version

Assessment attempt unreachable

COVERAGE STILL UNKNOWN

Attempt recorded with time and scope. Area gap remains visible; next owner and alternative check required.

Record reason / next owner

Disputed receipt report

OUTCOME DISPUTED - NEED OPEN

Team delivery report and household account differ. Preserve both; review each need and correction basis.

Inspect conflicting evidence

Scenario clock only | Each observation and plan retains its own time.

1 No false success

Incomplete call is not completed intake. It cannot silently change a case.

2 Version integrity

The review must catch current-version conflicts before an authoritative write.

3 Unknown coverage

An unreachable check does not mean the area has no needs or has been assessed.

4 Outcome evidence

Delivery and receipt stay separate. Coordinator approval alone is not corroboration.
